What are

CARBON CREDITS?

1 carbon credit = offsetting 1 ton of CO_2

Earned by cutting/avoiding emissions (trees, renewables, etc.)

They're becoming big business → lets companies claim "Net Zero"

Credits can then be bought, sold, or traded — like a parallel currency for pollution.

Why They Matter Now?

🚀 Carbon market = projected $50B by 2030

🌍 India could supply 10–15% of global credits

💼 Every sector — from tech to textiles — is buying in.

The Carbon Credit Loophole

- Carbon credits were meant for planting trees & cutting emissions.

But here's the twist 👇

- Instead of reducing their own pollution, companies simply **buy credits from others** (huge farm lands etc.)

It's cheaper. It's faster.

But is it really **sustainable?**

Fashion's Green Makeover

- Fashion = 10% of global emissions
- But now → brands racing to carbon neutrality:

GUCCI → **100% carbon neutral**

NIKE → **renewable offsets for all electricity**

H&M → **pledges climate-positive future**

⚡ **Carbon credits = their shortcut to "green".**

India’s Green Reservoir: Vantara

Anant Ambani’s Vantara — pitched as the world’s largest animal rescue project.

- On the surface: wildlife conservation.
- But in reality: it’s also a **massive carbon sink.**

Think about it

— protected land + biodiversity = future carbon credit goldmine.

Passion project today, billion-dollar “green asset” tomorrow.

How Businesses Play the Carbon Game

- Corporates offset emissions they can’t cut.

Some even sell surplus credits ➔ fresh revenue stream.

Example: if I buy credits and do not use all of them➔ I can sell them at a profit.

BCCI’s green campaign

We have seen this score card during the IPL ....

What do these trees there mean?

- Each tree symbolizes one dot ball.
- BCCI took the initiative to plant 500 trees for every dot ball bowled.

Were those trees actually planted ?

We don’t know.

But the answer feels a lot like carbon credits.

That’s how CCs are often used — (or misused?).

Carbon Credit(s) Markets Around the World

Country/Region	Scheme Name	Status
European Union	European Union Emissions Trading System (EU ETS)	✅ Implemented
China	China's Emissions Trading Scheme (China ETS)	✅ Implemented
United States (California)	California's Cap-and-Trade Program (linked with WCI)	✅ Implemented
South Korea	Korea Emissions Trading Scheme (K-ETS)	✅ Implemented
New Zealand	New Zealand Emissions Trading Scheme (NZ ETS)	✅ Implemented
Canada (Quebec)	Quebec's Cap-and-Trade System	✅ Implemented

.....there are others too

India is also gearing up —
the Carbon Credit Trading Scheme (CCTS) was announced under the
Energy Conservation (Amendment) Act, 2022
and is currently in the planning stage.

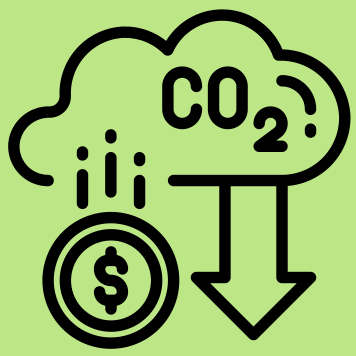
Carbon credits =



🌱 sustainability tool,

💸 business strategy,

📊 future economy.

The question is:

Are they saving the planet — or just buying time?
